EEC-2001 Wins *Motor Boating* Magazine's Boatkeeper Award

(Conway, SC) — *Motor Boating* magazine's first annual Boatkeeper Awards, honoring products from the marine industry, has chosen the Glendinning EEC-2001 as best multifunction control for the year!

The editors chose the EEC-2001 because, "it offers a combination of features that make it a standout helm system, designed specifically for electronically controlled engines and transmissions. The Glendinning EEC-2001 also has an integrated, automatic backup system that switches to mechanical mode if an electrical problem should occur (separate handles are not required, nor is a trip to the engine room to switch cables)." Combine this with other innovative features such as "posi-lock" gear lockout, control head detent and /or drag settings which can be changed easily without disassembly of the control head, 7 different idle speed settings, "slow mode" that cuts wide open throttle in half, and a six station capability and you can understand why it was chosen by the *Motor Boating* staff for innovation, technology and utility.
